HOSTED CORE SOLUTIONS

2nd Node offers production, failover and/or tertiary host backup services for core host systems, eliminating or reducing the capital expense of purchasing and maintaining hardware. When a credit union faces environmental or functional challenges, 2nd Node is able to stand in for your credit union's operations in our high-performance data center that emulates your credit union's infrastructure, mission-critical transaction processing capabilities, and communication networks. 2nd Node provides options for solid state drives or high-speed disks for data storage based on client operating requirements.

DATA CENTER SERVICES

The 2nd Node Data Center is designed to meet the unique needs of credit unions – whether your goal is to replicate real-time data to an off-site facility or co-locate equipment, 2nd Node can provide a secure solutions to meet your individual situation. Outsourcing your hot-site can help your credit union not only improve efficiency by saving staff time, but can also serve to reduce overall expenses. The 2nd Node Data Centers are managed to the highest standards in the industry.

CLOUD-BASED COMPUTING

2nd Node has developed unique cloud architecture offering flexible outsourcing options to help organizations transition to the cloud. 2nd Node Private Cloud provides clients the ability to store data and system files, electronically vault system backups, operate and/or restore network systems in the 2nd Node virtual server environment and replicate their primary data center SAN(s) to the 2nd Node SAN storage systems. High performance network concentrators are used for optimizing and encrypting data communications for remote operations and production systems.

BUSINESS CONTINUITY

Our comprehensive Business Continuity Services ensure that your organization is able to support the recovery of key business operations in the event of a disaster. The reliability of technology services has become a competitive differentiator in a world focused on retaining customer market share and meeting customer expectation. In a global market, where services must be delivered 24/7, the loss of technology services for even short periods of time can put your business at risk, as you scramble to recover and restore key operations.

DATA REPLICATION

2nd Node provides complete tapeless backups to local or remote storage devices. 2nd Node Vaulting utilizes a tapeless data backup and recovery solution that enables credit unions to store critical data at either a secure off-site location or to an internal storage solution.
